Sirocco asked Hanlon..something that required no effort, no slightest sacrifice..when, as she lay sleepless in another time and place, they had rolled past in the night with a rhythmic.other, in pieces, to the mutt.."Okay, then what about human beings crossed with puppy dogs?".if melancholy sense of what might have been?but never would be..Not long after Colman and Kath had sat down, 5wyley's radar detected Sergeant Padawski and a handful from B Company entering the main door outside the bar. They were talking loudly and seemed to be a little the worse for drink. Colman noticed Artira and another girl from Brigade with them, clinging to the soldiers and acting brashiy. He shook his head despairingly, but it wasn't really his business. After some tense moments of indecision and debate in the lobby the newcomers went downstairs without noticing the group from D Company. Then the party became more relaxed, and Colman soon forgot about them as some of Kath's acquaintances joined in ones' and twos, and the painter came across after recognizing Colman, having stopped by for a quick refresher on his way home some two hours previously..denial, knocked the breath out of her..These people form a gauntlet of sorts through which Curtis and Old Yeller must pass. In a lot of ways lay reminded Colman of himself when he was a lot younger. Colman had acquired his name from a professional couple who adopted him when he was eleven to provide company for their own son, Don, who was two years older. They hadn't wanted to disrupt their careers by having another child of their own. Colman's stepfather was a thermodynamics engineer involved with heat exchangers in magnetohydrodynamics systems, which accounted for Colman's early interest in technology. Although the Colmans had done their best to treat both boys equally, Steve resented Don's basic schooling and was jealous when Don went to college to study engineering, even though he himself had then been too young W do the 'same. The rebelliousness that" had contributed W Steve's being placed in the home for wayward adolescents from which he had been adopted reappeared, resulting in his giving the couple some hard times, which upon reflection he felt bad about. For some reason that Steve didn't understand, he felt that if he could help Jay realize his potential and use the opportunities he had, it would make up for all that. Why, he didn't know, because nothing he did now could make any difference to the Colmans, who were probably old and gray somewhere, but he felt he owed it to them. People's minds worked like that. Minds could be very strange..not only solace but also inspiration in this Gen Zen. This evolving Micky returned her aunt's wave..It's impregnable, Colman thought to himself as he lay prone behind a girder mounting high up in the shadows at the back of the antechamber and studied the approaches to the lock. The observation ports overlooking the- area from above and to the sides could command the whole place -with overlapping fields of fire, and no doubt there were automatic or remote-operated defenses that were invisible. True, there was plenty of cover for the first stages of an assault, but the final rush -would be suicidal - - and probably futile since the lock doors looked strong enough to stop anything short - of a tactical missile. And he was beginning to doubt if the demolition squad suiting up to go outside farther back in the Hexagon would be able to do much good since the external approaches to the module would almost certainly be covered just as effectively; he knew how the minds that designed things like this worked-.Noah pressed STOP on the remote control. The serpent huddled all the way back against the wall, and about as far from one side of the chest of. "Oh, okay," lay said. "Their laws couldn't tell them anything about the cold universe before that instant. Flame physics only came into existence when the flame did." The atmosphere became more serious as Bernard and Lechat informed the Chironians that they now knew what the Kuan-yin was and what it could do. "We appreciate that you had to assume that the ship from Earth would be heavily armed and that it might have adopted an overtly hostile policy from the beginning," Lechat said, pacing about the room. "But that hasn't happened, and there are still a lot of people up there who are not a threat to anyone. The handful who are in control now are not representative, and their remaining support will surely erode before much longer. I'm anxious for whoever controls that weapon of yours to be aware of the facts of the situation. There can be no justification now for a tragedy that could have been avoided." Mrs. Crayford glanced at the dock display on the room's companel. "Well then, I really must be getting along. I did so enjoy the trip and the company. We must do it again soon." She heaved herself to her feet and looked around. "Now, where did I leave my coat?" Bouncing on the bed, giggling prettily, old Sinsemilla relived the comic moment: "Snake goes boing! bite, so quickly reducing her to these spasms, these half-mad headlong frenzies, out of control. The Battle Module was a mile-long concentration of megadeath and mass destruction that sat on a base formed by the blunt nose of the Spindle, straddled by two pillars that extended forward to support the ramscoop cone and its field generators, and which contained the ducts to carry back to the midships processing reactors the hydrogen force-fed out of space when the ship was - at ramspeed. Sleek, stark, - menacing, and bristling with missile pods, defensive radiation projectors, and ports for deploying orbital and remote-operating weapons systems, it contained all of the Mayflower II's strategic armaments, and could detach if need be to function as an independent, fully self-contained warship. automatically lock, so the truck skates like a pig on ice, with a lot more squeal than grace, though the you! everyone else perished. whispered sanitarium. The faux-Persian rug, though inexpensive, lent grace and warmth to the space. found. Geneva brightened. "Now you're talking." Earth?. "Is Sirocco around?" Colman moved over to the washbasin to rinse his face. Stormbel was a short, stocky, completely bald man with pale, watery eyes and an expression that never conveyed emotion. A thin moustache pencil-lined his upper lip. He put his hands on his hips and stared for a few seconds at the gaping faces before him. "This Congress is dissolved," he announced in his thin but piercing, high-pitched voice. "The Mission is now under the direct command of the Military." He turned his head to Borstein "You are relieved of command of both the regular and Special Duty forces. Those functions are now transferred to me." To permit rapid and effective response to emergencies, the Mission Director was empowered to suspend the democratic process as represented by Congress, and assume sole and total authority for the duration of such emergency situations as he saw fit to declare. Although this prerogative had been intended as a concession to the unknowns of interstellar flight and to apply only until the termination of the voyage itself, Judge Fulmire had confirmed Kalens's interpretation that technically it would remain in force until the expiration of Wellesley's term of office. The question now was: Could this prerogative be extended to whomever became chief executive of the next administration, and if so, who was empowered to write such an amendment into law? The full Congress could, of course, but wouldn't, since that would amount to voting away its own existence. Under the unique privileges accorded to him and technically still in force, could Wellesley?. proceed westward across open terrain, paralleling but bypassing the halted traffic on the highway. -That was exactly what Gustav said we should do," Ci said, giving Colman an approving look. "He was looking at it yesterday." The Chironian, by contrast, saw a rich, bright, vibrant universe manifesting at every level of structure and scale of magnitude. The same irresistible force of self-ordering, self-organizing evolution that had built atoms from plasma, molecules from atoms, then life itself, and from there produced the supreme phenomenon of mind and all that could be created by mind. The feeble ripples that ran counter to the evolutionary current were as incapable of checking it as was a breeze of reversing the flow of a river; the promise of the future was new horizons opening up endlessly toward an ever-expanding vista of greater knowledge, undreamed-of resources, and prospects without limit. Far from having probed the beginnings of all there was to know, the Chironian had barely begun to learn. minute, deeper than mere night. massive Indian laurels, and though it wasn't shaded by the trees, it was sixty or eighty feet from the. "No offense, Micky, but the story of Dr. Doom and his multiple homicides is a dreary tale, more tedious. shuddered. Not out of morbid interest but with some degree of alarm, she'd researched self-mutilation soon after her. Shot dinnerware explodes in noisy disharmonious chords; bullet-plucked metal racks produce jarring. Leon nodded gravely from his section of the screen. . "That is a risk," he agreed. "As Otto said, it is difficult to judge exactly. However, we think that the policy we have outlined minimizes risks to the majority of people. Nothing will eliminate the risks completely." He drew a long, heavy breath before answering Bernard's question directly. "But there can be no alteration of our resolution." WELLESLEY STOOD TO deliver his final address from in front of the Mission director's seat at the center of the raised dais facing out over the Congressional Hall of the Mayflower ifs Government Center. In it he recapitulated the events that had taken place since the Mission's arrival at Alpha Centauri, dwelled for a long time on the things that had been learned and the transformation of minds that had been brought about since then, paid tribute to those who had lost their lives to preserve those lessons, and elaborated on the promise that the future now held for everybody on the planet, referring to them pointedly as "Chironians" without making distinctions. If the Chironians were already fitting out the Kuan-yin, they must have solved a lot of the problems that were still being argued on Earth, Colman thought. The whole planet, he

realized as he reflected on it, was a powerhouse of progress, unchecked by any traditions of unreason and with no vested-interest obstructionists to hold it back. If the pattern continued until Chiron became a fully populated world, it would effectively leave Earth back in the Stone Age within a century. "Have you actually flown it anywhere yet?" he asked, turning his head toward Kath. "The Kuan-yin . "But why does it have to be? Our ideas of currency are based on its being backed by a finite standard because that's all we've ever known. The gold-standard behind the Chironians' currency is the power of their minds, which they consider to be an infinite resource. Therefore they do their accounting with a calculus of infinities. You take something from infinity, and you've still got infinity left." He shrugged. "It's consistent. I know it sounds crazy to us, but it fits with the way they think".Borftein thought about the remark for a-few seconds. "Do you think that could be what Sterm's hoping for?"
